Product Information

Think of the ANDERSEN Line Tender as an extra hand when setting a spinnaker uphaul, moving a genoa-car or working your jib furler. Its ratcheting system firmly grips the line so it can be easily held in position or released as needed. Highly flexible, you can select left or right ratcheting by switching the spring-loaded pin, or it can set to freewheel by removing the drum and rotating the pawl housing 90 degrees. Available for fixed or track mounting.
